

STEP BY STEP PROCESS ABROAD

Cross Border IVF Treatment

Established in 2004, ELITE IVF's cross border IVF platform continues to demonstrate proven success.

Patients are guided during each phase of their IVF treatment by a personal medical coordinator. Also supporting the process are five additional ELITE IVF professionals, each representing a specific department.

Below you will find a step by step explanation of ELITE IVF's process when traveling abroad to receive an egg donation treatment.

PRIOR TO EMBRYO TRANSFER

Travel

An ELITE IVF logistics coordinator manages the patient's complete travel plan and logistics.

Prior to travel, the patient receives all the required travel information, including: e-tickets, hotel confirmation and contact details of ELITE IVF's representative abroad, known as the on-site patient coordinator.

Arrival at the airport and hotel

The patient arrives at the destination abroad one day prior to the egg collection day. Upon arrival, the patient is greeted at the airport by their on-site coordinator and a private chauffeur who provides transfer to the hotel.

The recipient receives a local mobile phone for their use throughout their stay in order to be easily reachable and have direct phone access to ELITE IVF staff worldwide including the on-site coordinator's mobile number.

Destination Clinic

The day following the recipient's arrival, the on-site coordinator meets the patient for transfer to the clinic for the first visit with their attending physician.

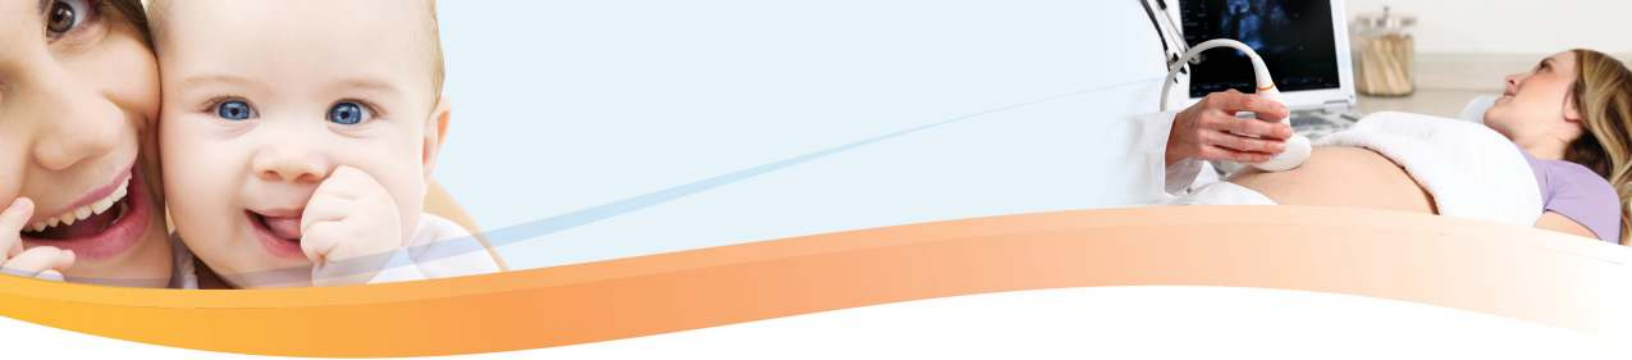

At the destination clinic, the recipient meets the physician for a physical examination, clinic orientation and to reconfirm the entire IVF and embryo transfer process. This is an opportunity to review the treatment details and clarify any remaining questions prior to the creation of embryos.

Semen & Egg Collection, Embryo Development

After meeting with the physician, on the same day and visit, semen is collected from the recipient's partner (if using fresh semen).

During the semen collection, eggs are retrieved from the selected donor.

The retrieved eggs are then fertilized with the collected semen, and embryo development begins.

DURING EMBRYO DEVELOPMENT

During the 3-5 day period of embryo development, the recipient has free time to rest. Options available during this time:

- The hotel accommodation is a 5 star level and offers a vast selection of amenities (dining, spa, pool, fitness center, shops, and tennis)
- Leisure time in the heart of the city: coffee shops, museums, shopping and entertainment

DAY OF EMBRYO TRANSFER

Destination Clinic

On the day of the embryo transfer, the recipient is greeted at the hotel by the on-site coordinator and chauffeured to the clinic for the second and final visit with the attending physician.

The recipient meets the physician to review and discuss the upcoming embryo transfer and to approve the choice of the most viable embryos formed and prepared for embryo transfer.

Full information including actual images of the embryos and embryo potential survival rates are provided to the patient. Based on this discussion, the embryo transfer plan is determined and the patient proceeds to the embryo transfer.

AFTER THE EMBRYO TRANSFER

Rest

The patient will have ample rest time after the transfer. This begins with a brief rest at the clinic followed by a full day's rest at the hotel.

The following day after embryo transfer, the patient is chauffeured to the airport for the trip home.

Pregnancy Test

A quantitative beta-HCG is performed 12 days after the embryo transfer at the patient's home clinic to verify if a pregnancy is achieved. The pregnancy test date is scheduled by ELITE IVF with the patient's clinic and the results are also communicated to the patient by ELITE IVF.

ELITE IVF

offers a complimentary guided tour – including a personal tour guide, driver and an authentic meal to savor the local culture.

Pregnancy Follow Up

Once a positive pregnancy is confirmed, ELITE IVF provides a protocol to the patient's home clinic regarding medication reduction and ultrasounds.

ELITE IVF's role at this point is completed and the patient's home clinic takes over the responsibility for managing the follow up. However, as a courtesy, ELITE IVF remains available to the patient for second opinion queries or emergency support, if requested, until the end of the first trimester.
